

## **Key Chinese distributor appointed by Solid Sands**

**Amsterdam and Shanghai – 16 September 2021** – Solid Sands, the world leader in compiler and library testing and qualification technology, has announced a new strategic supplier in China. The agreement will see Shanghai-based Vision MC responsible for distribution of Solid Sands' products across China.

Solid Sands used to do direct business within the Chinese market, establishing a loyal customer base. Vision MC joins established distributors for Solid Sands in India and Japan, providing complete coverage across the largest Asian markets.

Marianne Damstra, chief commercial officer at Solid Sands, explained: "We have a strong existing presence in China and appointing Vision MC is a logical next step to provide a local point of contact for companies seeking to enjoy the benefits of our products."

"Vision MC is a well-known and highly respected company that already distributes on behalf of other leading software and technology brands in China, and we are confident of Vision MC's ability to expand our presence in this vital, growing market."

"With native Chinese speakers on staff, the Solid Sands team will continue to provide after-sales and technical support, allowing us to serve clients in their own language and supporting them in getting the most out of their investment."

The Solid Sands range includes SuperTest, the acclaimed test and validation suite for C and C++ compilers and libraries; and the new SuperGuard Library Safety Qualification Suite, a requirements-based test suite for the C standard library.

Garrison Gu of Vision MC added: "We already distribute on behalf of a number of leading brands into sectors including transport and power generation. We are confident we can use our contacts and extensive market knowledge to support Solid Sands in developing and maximising its customer base here in China."

Among the Chinese customers of Solid Sands is Huawei, from whom Zhu Qingping commented: "SuperTest classifies and organizes C language standards. Its test cases are clear. It is the perfect test suite for verifying the basic points of the C compiler."

END

### **About Solid Sands**

Founded in 2014, Solid Sands is the one-stop shop for C and C++ compiler and library testing, validation and safety services. Solid Sands offers extensive test and validation suites with a unique level of compiler and library test coverage, enabling customers to achieve the software tool quality level demanded by ISO standards. The company's name combines sand – the world's most abundant source of silicon – with the solidity and security expected of sector-leading testing and validation technologies. More information on the company's products and services is available at <http://www.solidsands.nl/>. You can follow Solid Sands on [LinkedIn](#), [Twitter](#) and [YouTube](#).

### **About Vision Microsystems (Shanghai) Co., Ltd.**

Shanghai Vision Microsystems Co., Ltd. was founded in 2000. The headquarters and R&D center of VisionMC are in Shanghai, and there are also offices in Beijing, Chengdu, Xi'an, Guangzhou, Nanjing, and Hong Kong.

VisionMC is committed to make intelligent devices and systems safer and more reliable - providing comprehensive development and verification solutions for high-security, high-reliability system software, including three series of through system software develop the whole life, such as embedded system software and hardware development solutions, system simulation and measurement and control solutions, and system software engineering solutions, and so on.

VisionMC also provides professional consultation and service for its customers. Company business areas involve aerospace, defense military industry, industrial control, power nuclear energy, rail transit, automotive electronics, medical electronics, and many other fields that require high reliability and high security.
